

## Torque key electric 3/8" for nut drivers, adjustable torque limit

Safety is top priority when users are working on live parts. Electricians are ideally equipped with the insulated torque key at a 10° switching angle, especially when fastening components onto bus bars in junction boxes. With two directions of rotation, this torque key is ideal for powerful, yet controlled tightening. The user can pull out and turn the handle end to set the required torque value manually by looking at the numeric scale. In addition, thanks to the ball fastener, the nut drivers inserted on a 3/8" square drive provide a secure hold. Enjoy excellent feedback while fastening and a noticeable snap back on the torque mechanism in the key when the preset torque value is reached. The insulated torque key has undergone an individual piece test as per the international EN/IEC 60900 standard, allowing users to work safely on live parts up to 1000V AC.

- Torque range: 5 - 25 Nm. To set the appropriate torque, pull the end of the handle down and adjust the desired torque value on the wheel.
- Meets your requirements Variably adjustable torque covers a wide range of applications.
- Increases your efficiency The correct torque protects material from damage and means no follow-up work.
- Lowers your costs The correct torque protects you from warranty claims.
- Provides you with full protection Each tool individually tested at 10,000 V AC and approved for 1,000 V AC.
- The clockwise/anticlockwise rotation can be adjusted at the head of the ratchet.

- Part number: 44163
- 3/8" slip drive
- 5-25 Nm
- Length: 290mm
- Weight: 610g
