

PPxx-1000 air hydraulic pumps are very compact pumps that work in any position, horizontally or vertically, thanks to a rubber bladder built into the tank. The pumps can easily be operated by hand or foot.

- High oil flow.
- Easy to fill up and check oil level.
- Over pressure safety valve prevents overfilling of the tank during release operation - minimizes risk of injury.
- Return oil line can easily be connected to oil reservoir filler hole.
- Reliable and service friendly.
