

VASI laboratory with skilled technicians can repair and refurbish most torque measurement equipment from Norbar.

We carry most spare parts in stock and has special developed tools avoid damage to the equipment.

This reduces downtime and expensive freight costs

VASI operates a ISO 17025 compliant test laboratory for torque and ultrasonic elongation measurement. This includes physical torque application and electronic measurement.

After repair, all sensor equipment is recalibrated. Calibration certificate are according with the current standard for measuring devices (BS7882:2017), and show the nominal torque carried out, and the measured torque readings. measured readings may be given in mv/v on request. details of the usual are to be had on request.
