

VASI has developed a special range of SubSea Valve & Clamp Tools

The tool consist of a gear, an API Class 4 input, a ROV handle and an API Class 7 or custom made output

The gears are filled with oil and is operational down to 3000 meters with any standard ROV

Depending on type of use, these can be permanently installed or light weight flyable intervention tools

The tools are light weight so there is no need for extra buoyancy.
